

clients.alai.no — Hosted Proposal Page

clients.alai.no — Hosted Proposal Page

Type: Vercel static site **Target URL:** <https://clients.alai.no> **Source:** `~/business/ALAI-Holding-AS/products/clients-alai-no/` **MC task:** #9410

Purpose

Minimal, single-purpose hosted proposal landing page. One CTA hands off to ALAI Documenso for signing (<https://sign.alai.no/signin>). No framework, no JS, no build step — hand-written HTML5 + vanilla CSS, deployed via `vercel --prod`.

Design

- ALAI dark theme: `--bg:#09090b`, `--surface:#111113`, `--accent:#00E5A0`, `color-scheme: dark`.
- Mobile-first: single-column layout under 720px, 3-column feature grid + horizontal CTA row above 720px (`@media (min-width: 720px)`).
- Exactly one interactive element on the page: the CTA anchor.
- `robots.txt` = `Disallow: /` (private proposal link, not for search indexing).

Verified state (2026-08-08)

- `curl -sI https://clients.alai.no` → `HTTP/2 200`, served by Vercel, `content-length: 6885` (byte-for-byte match with local `index.html`).
- Live HTML has exactly one `<a>` tag → `href="https://sign.alai.no/signin"`.
- `https://sign.alai.no/signin` → `HTTP 200` (Documenso reachable, not a dead link).
- Vercel project linked: `prj_2Qzvszx7qg4pnzsRf3ZqhddUMaam`.
- `robots.txt` served correctly at `/robots.txt`.

Known gap

The `products/clients-alai-no/` directory is **untracked** in the `ALAI-Holding-AS` git repo — it was deployed straight via `vercel --prod`, not through git-triggered CI. Non-blocking (the live deploy works), but a follow-up commit would close the hygiene gap. Not done in this pass because the parent checkout was mid-way on an unrelated feature branch (`feat/oauth-metrics-reader-103888`).

Local verification

```
cd ~/business/ALAI-Holding-AS/products/clients-alai-no
python3 -m http.server 8765
curl -s http://localhost:8765 | grep -c "Proceed to secure signing"
```

Deploy

```
vercel --prod
vercel domains add clients.alai.no
```
