

Feature Flags

Drop Feature Flags

```
“ Sources: src/drop-app/src/lib/feature-flags.ts, src/drop-app/src/lib/features.ts
```

Feature Flag System

Source: `feature-flags.ts`

Architecture

Feature flags are controlled via **environment variables** with the pattern:

```
NEXT_PUBLIC_FF_<SCREAMING_SNAKE_CASE>=>true|false
```

The `NEXT_PUBLIC_` prefix ensures flags are available on both server and client (inlined at build time by Next.js).

Conversion example: `physicalCards` → `NEXT_PUBLIC_FF_PHYSICAL_CARDS`

Source: `feature-flags.ts:42-45`

Available Flags

| Flag Name | Env Var | Default | Description |
|---------------|-------------------------------|---------|------------------------|
| virtualCards | NEXT_PUBLIC_FF_VIRTUAL_CARDS | false | Virtual card issuance |
| physicalCards | NEXT_PUBLIC_FF_PHYSICAL_CARDS | false | Physical card ordering |
| cardDetails | NEXT_PUBLIC_FF_CARD_DETAILS | false | View full card details |

| Flag Name | Env Var | Default | Description |
|-------------------|-----------------------------------|---------|----------------------|
| cardFreeze | NEXT_PUBLIC_FF_CARD_FREEZE | false | Card freeze/unfreeze |
| cardPin | NEXT_PUBLIC_FF_CARD_PIN | false | Card PIN management |
| spendingLimits | NEXT_PUBLIC_FF_SPENDING_LIMITS | false | Card spending limits |
| notifications | NEXT_PUBLIC_FF_NOTIFICATIONS | true | Push notifications |
| merchantDashboard | NEXT_PUBLIC_FF_MERCHANT_DASHBOARD | true | Merchant dashboard |

Source: `feature-flags.ts:27-36`

Server-Side API

| Function | Return Type | Description |
|--------------------------------|----------------------------------|---|
| <code>isEnabled(flag)</code> | <code>boolean</code> | Check if a flag is enabled |
| <code>getAllFlags()</code> | <code>FeatureFlags</code> | Get all flags with current values |
| <code>featureGate(flag)</code> | <code>NextResponse null</code> | API middleware: returns 404 response if disabled, null if enabled |

`featureGate` usage in routes:

```
// In any route handler:
const gate = featureGate("physicalCards");
if (gate) return gate; // Returns 404 with "Feature not available"
```

Source: `feature-flags.ts:80-88`

Routes using `featureGate`:

| Route | Flag |
|-------------------------------|-----------------------------|
| POST /api/cards/[id]/physical | <code>physicalCards</code> |
| POST /api/cards/[id]/pin | <code>cardPin</code> |
| GET /api/cards/[id]/limits | <code>spendingLimits</code> |
| PUT /api/cards/[id]/limits | <code>spendingLimits</code> |
| GET /api/notifications | <code>notifications</code> |
| PATCH /api/notifications | <code>notifications</code> |

Client-Side API

| Function | Return Type | Description |
|-----------------------------------|---------------------------|------------------------------|
| <code>useFeatureFlag(flag)</code> | <code>boolean</code> | React hook for a single flag |
| <code>useFeatureFlags()</code> | <code>FeatureFlags</code> | React hook for all flags |

These work because `NEXT_PUBLIC_*` env vars are inlined at build time — no server roundtrip needed.

Source: `feature-flags.ts:94-114`

Feature Tracking System

Source: `features.ts`

A separate system for tracking **implementation progress** of Drop features. Not runtime flags — this is a development tracking tool.

Feature Interface

```
interface Feature {
  id: string;           // e.g., "auth-001"
  category: string;    // e.g., "Authentication"
  name: string;        // e.g., "User Registration"
  description: string;
  status: "pending" | "in_progress" | "passing" | "failing";
  priority: number;    // 1 = highest
  dependencies: string[]; // IDs of prerequisite features
  acceptanceCriteria: string[];
  implementedAt?: string; // ISO date
  testedAt?: string;     // ISO date
}
```

Feature Categories and Status

| Category | Total | Passing | Pending | Notes |
|----------|-------|---------|---------|-------|
|----------|-------|---------|---------|-------|

| | | | | |
|----------------|---|---|------------------------|---|
| Authentication | 4 | 3 | 1 (Biometric Login) | |
| KYC | 1 | 1 | 0 | |
| Banking | 6 | 5 | 1 | bank-006 (Top-up via Card) is FUTURE — incompatible with pass-through model |
| Cards | 4 | 4 | 0 | FUTURE — all card features are gated behind feature flags (default: false) |
| Notifications | 1 | 0 | 1 (Push Notifications) | |

All Features

| ID | Name | Status | Priority | Dependencies | Notes |
|----------|-----------------------|---------|----------|--------------------|---|
| auth-001 | User Registration | passing | 1 | - | |
| auth-002 | PIN Login | passing | 1 | auth-001 | |
| auth-003 | Logout | passing | 2 | auth-002 | |
| auth-004 | Biometric Login | pending | 3 | auth-002 | |
| kyc-001 | Identity Verification | passing | 1 | auth-001 | |
| bank-001 | IBAN Generation | passing | 1 | kyc-001 | |
| bank-002 | Balance Display | passing | 1 | bank-001 | AISP read-only |
| bank-003 | Send Money | passing | 1 | bank-002 | PISP from user's bank |
| bank-004 | Receive Money | passing | 1 | bank-001 | |
| bank-005 | Transaction History | passing | 2 | bank-003, bank-004 | |
| bank-006 | Top-up via Card | passing | 2 | bank-001 | FUTURE — no wallet in pass-through model |
| card-001 | Virtual Card Issuance | passing | 1 | kyc-001 | FUTURE — feature-flagged |
| card-002 | Card Freeze/Unfreeze | passing | 2 | card-001 | FUTURE — feature-flagged |
| card-003 | Card Transactions | passing | 1 | card-001 | FUTURE — feature-flagged |
| card-004 | Physical Card Order | passing | 3 | card-001 | FUTURE — feature-flagged |

| ID | Name | Status | Priority | Dependencies | Notes |
|-----------|--------------------|---------|----------|--------------|-------|
| notif-001 | Push Notifications | pending | 3 | auth-001 | |

Helper Functions

| Function | Description |
|--|---|
| <code>getFeaturesByStatus(status)</code> | Filter features by status |
| <code>getFeaturesByCategory(category)</code> | Filter features by category |
| <code>getFeatureStats()</code> | Get counts: total, passing, pending, inProgress, failing, percentComplete |
| <code>getReadyFeatures()</code> | Features whose dependencies are all <code>passing</code> |
| <code>printFeatureReport()</code> | Formatted text report |

Source: `features.ts:284-357`

Environment Variable Summary

| Variable | Purpose | Default |
|--|---------------------------------|-------------------------------|
| <code>NEXT_PUBLIC_FF_VIRTUAL_CARDS</code> | Enable virtual cards | false |
| <code>NEXT_PUBLIC_FF_PHYSICAL_CARDS</code> | Enable physical cards | false |
| <code>NEXT_PUBLIC_FF_CARD_DETAILS</code> | Enable card detail view | false |
| <code>NEXT_PUBLIC_FF_CARD_FREEZE</code> | Enable card freeze | false |
| <code>NEXT_PUBLIC_FF_CARD_PIN</code> | Enable card PIN | false |
| <code>NEXT_PUBLIC_FF_SPENDING_LIMITS</code> | Enable spending limits | false |
| <code>NEXT_PUBLIC_FF_NOTIFICATIONS</code> | Enable notifications | true |
| <code>NEXT_PUBLIC_FF_MERCHANT_DASHBOARD</code> | Enable merchant dashboard | true |
| <code>NEXT_PUBLIC_SERVICE_MODE</code> | mock or production | mock |
| <code>DATABASE_URL</code> | PostgreSQL 16 connection string | Required (no SQLite fallback) |
| <code>JWT_SECRET</code> | JWT signing secret | dev-only fallback |
| <code>NEXT_PUBLIC_APP_URL</code> | App URL for CSRF | - |
| <code>SEED_DEMO</code> | Enable demo data in staging | - |
