

MC 900217 — admin ticket messages wire

MC #900217 — Admin support: wire GET messages endpoint u ticket detail

BEFORE marker (2026-08-25, John): build kreće u WAVE 1 mastera #900230 (pi builder, p2p).

Nalaz (maria-santos #900076 sweep, 24.08.)

- Frontend `apps/web/app/admin/support/[id]/page.tsx:60-69` + `api-support.ts:218-232` nose STALE komentar da endpoint ne postoji; thread drži session-scoped → gubi se na refresh.
- Endpoint POSTOJI od MC #106078: `SupportTicketRoutes.kt:898-951` — GET `/admin/support/tickets/{id}/messages`.

Opseg (XS-S, bez backend rada)

1. `getAdminSupportTicketMessages(ticketId)` u `api-support.ts` — ogledalo customer-side funkcije.
2. Poziv na load u admin ticket detail.
3. Ukloniti stale komentar.

Acceptance

- Refresh admin ticket detail stranice zadržava poruke threada (dokaz: Playwright ili browser screenshot prije/poslije).
- Postojeći testovi zeleni; nova asercija na load poziv.

- PR: Gemini review + Redzo review prije merge (master #900230 model).

BEFORE: WAVE1 build start 2026-08-25, dispatch pi
