

MC 900242 — Stage readiness sonda retry (2026-08-25)

MC #900242 — Stage readiness sonda: retry petlja umjesto one-shot (2026-08-25)

Task: [Bilko][M][CI] one-shot ~22s sonda obara main buildove POSLIJE uspješnog deploja (1328, 1347) i time blokira E2E_UAT/Promote.

Dokazi

- Build 1328 (24.08. 20:33): probe fail 503 na ~22s; stage zdrav minutu-dvije kasnije (John verificovao 200 + ispravan image).
- Build 1347 (25.08. 15:47): identičan potpis; slike stage-06b599ec VEĆ ažurirane (log 15:46:38), probe 503 u 15:47:23, stage živ na novom buildu ~16:05 (health 200). Partial-execution klasa: build crven, deploy legao.
- Uzrok: clamd sidecar (PR #404) produžio boot 2-kontejner revizije preko probe prozora.

Plan

Pi: uski PR na `azure-pipelines.yml` — Stage readiness probe kao petlja (do 240s, poll 10s, PASS čim api+web = 200; log svakog pokušaja; FAIL tek po isteku). Ništa drugo se ne mijenja.

Rezultat (2026-08-25 ~23:5x)

- PR #413 (pi, commit bd8f4b40): readiness sonda kao petlja 240s/10s, samo taj inlineScript (YAML-tree dokaz 1/6, behavior test: oporavak na 3. pokušaju exit0, permanentni 503 tačno 24 pokušaja exit1). Validacija 1350 zelena → merge 34c776ca.

- ŽIVI DOKAZ: build 1352 Deploy→Stage PROŠAO tačno gdje su 1328/1347 lažno padali; 1361 isto (deploy faza zelena).
- Nalaz (pod-stavka, ne dirano): demo PI2 verify i dalje sleep30+one-shot obrazac.
- Evidence: ~/system/evidence/900242/ (p2p replyji, blocked→npm ci autorizacija).

(Ceremonija: resume nakon autowork pauze; resubmit 2026-08-25T21:43:27.898Z.)

Revision #3
