

bilko.cloud landing truth and CTA remediation — MC #106174/#107324 — 2026-08- 18

bilko.cloud landing truth and CTA remediation — MC #106174/#107324

Date: 2026-08-18 · **Status:** candidate branch validated; **NOT merged, NOT deployed, NOT live**

Root cause

The earlier honest-claims corrections existed on commits `149bb1a0` and `d0f94baa` but were never merged into canonical Azure DevOps main. MC #107298 later hardened and deployed the runtime-only landing tree from main, which still carried stale beta, PSD2, trial and pricing copy. Browser and byte-hash evidence proved live `bilko.cloud` was identical to green main `390bbb21`.

Candidate

- Branch: `fix/106174-landing-hr-truth`
- Base: `390bbb2171027478dabb2d6c9f5679cc3e5d9054`
- Candidate HEAD: `06acc46db1376f5f9726263fd0262445ec4912af`
- Runtime source: `apps/landing-hr/public/index.html`
- Changed scope: runtime HTML plus two focused tests only; MC #107298 headers, public-root controls, Functions and deployment files untouched.

What changed

- Removed eRačun beta/coming-soon, PSD2 auto-sync, 7-day/no-card trial and retired registration claims.
- Primary path is the verified instant HR demo; high-intent CTAs go to access/contact.
- Public copy distinguishes offline HR-CIUS/UBL preparation from inactive, unverified production sending.
- Removed placeholder 30/100 quotas, PD-O/ZP filing claims, unconditional OCR/AI, public API/webhooks/Google SSO, broad accounting/export/currency promises, migration SLA and absolute GDPR/AZOP/security claims.
- Preserved confirmed prices €9, €19 and +€18 while separating unresolved provider/overage charges.
- Owner/accountant wording promises prepared reviews/exports, not unsafe shared accountant access.

Verification

- Landing/public security check: PASS, 55 files, 0 errors.
- Node tests: 20/20 PASS.
- Builder browser proof: mobile/tablet/desktop PASS.
- Independent Finverge round 2: PASS, P0=0/P1=0.
- Independent cross-vendor Proveo: Playwright CLI 3/3 PASS at 390/768/1440, P0=0/P1=0, real demo CTA click, no request mocks.
- Worktree clean; exactly two landing-scoped commits.

Evidence

Durable evidence is stored under the local MC 106174 evidence root in the live-baseline, builder, finverge-review-round2 and proveo-round3 directories. The forged prompt is stored under the local forged-prompts registry for MC 106174.

Release boundary

This page documents a verified candidate. Production remains on stale main copy until branch push, Azure PR validation, CEO preview approval, merge and a separately verified Cloudflare Pages deploy. Do not describe this work as live before those steps.

Revision #1
