“ **Project:** Drop — Remittance + QR Payments **Version:** 1.0 **Date:** 2026-02-23  
**Author:** John (AI Director) **Status:** Active **Reviewers:** Alem Bašić (CEO)

## Document History

Version	Date	Author	Changes
0.1	2026-02-23	John	Initial RTM — mapped from brd.md, functional-requirements.md, TEST-INVENTORY.md

## 1. Purpose of Traceability

The RTM maps requirements through the full SDLC: Business Requirement → Functional Requirement → User Story → Code → Test Cases

Functions:

1. **Coverage Assurance** — Every business requirement has a test

2. **Change Impact** — When requirement changes, see all affected code and tests
3. **Gap Detection** — Requirements with no tests; tests with no requirements
4. **Audit Trail** — Demonstrates compliance for Finanstilsynet / investor due diligence
