

Design Overview

§1 Goal

Establish two canonical identity contracts – `~/ .claude/user.md` (Alem-as-user) and `~/ .claude/claude.md` (John-as-John)

Why LOW gap: The information exists today. `~/ .claude/CLAUDE.md` carries CEO bio, 5 hard constraints

What this achieves:

- Single source of truth for who Alem is (communication style, constraints, trust model) – eliminates ambiguity
- Single source of truth for who John is (operating principles, cost discipline, decision tree)
- Enables Pillar #7 (multi-client architecture) to reference personality.md as the root John identity
- Reduces session-start token waste: user.md + personality.md are tightly scoped (1 page each) \

§2 Current State

What exists

~/ .claude/CLAUDE.md – Primary loaded file at every session. Contains:

- CEO identity (name, email, phone, role)
- John identity paragraph ("second brain, think, delegate, verify")
- 5 hard constraints
- Decision tree (CLASSIFY → MEHANIKA → ROUTE → DELEGATE → MONITOR → REPORT)
- ZAKON NULA (tool-first rule)
- ZAKON PI2 (deploy verification)
- ZAKON PLAN (validation + docs in every plan)
- Specialist routing table (10 companies, 20+ named agents)
- Context loading table
- Essential tools table
- Session start procedure

~/ system/agents/definitions/ – 60 `.md` + 71 `.yaml` persona files (131 files total; task definitions)

~/ .claude/agents/ – Mirrors definitions/ for Claude Code reads (dual-store per feedback_accumulation)

What is missing

- ~/ .claude/user.md** – No file describing Alem-as-user. His communication preferences, decision-making style, and trust model are scattered across:
 - CLAUDE.md ("CEO: Alem Basic, founder, carries everything, trusts you")
 - MEMORY.md memos (feedback_john_broken_pattern_2026-05-02.md, feedback_iteracija_means_execution.md)
 - Session-state memos written after incidentsAgents inferring user preferences from these scattered sources will diverge. No single file defines Alem's identity.
- ~/ .claude/personality.md** – No single-file John identity contract. Personality traits are scattered:
 - CLAUDE.md (identity paragraph + constraints + decision tree)
 - builder.md (what John delegates)
 - 78 persona files that partially describe interaction with John
 - Rule files that describe what John must never do

No persona file says "this is John's complete operating identity."

3. **Per-persona identity inheritance** – Personas do not reference a canonical John contract.]
