Language Matching Rules

All client-facing communication MUST match the detected language:

- English email → English response
- Norwegian email → Norwegian response (NO)
- Bosnian email → Bosnian response (BS)

Language detection: Automatic via `intake-analyzer.js detectLanguage()`

- Detection: Character markers (æøå → NO, ćčšžđ → BS) + word frequency analysis
- Stored in: lead notes, drafts.db lang field, follow-up reminders

Internal communication: Always English (team, HiveMind, Slack, MM)

Implementation:

- All draft generation tools pass `lang` parameter
- Email templates exist in 3 variants: EN/NO/BS
- Follow-up reminders use language-aware templates
