

MC Verifier Registry

MC Verifier Registry

Actors in this list are permitted to mark H-priority tasks as `done` even when they are not the task owner.

MC #107143 (CEO directive 2026-08-14): `alem` is REMOVED from this registry as a routed/default verifier. "ready_for_review je bullshit — ko to treba da odradi review (ja)? Ne. ... Nikad ja i nikad ready na review da mene čeka." `alem` retains full owner-prerogative override — via `mc.js done --force --reason "<text>"` and the CEO-attestation force-approve/force-deny flow (A13/B7, HMAC-verified) — but that is an explicit, authenticated CEO ACTION each time, never a default assignment or an unconditional bypass.

Allowed Verifiers

- `john`
- `proveo`
- `validator`
- `flowforge`
- `codecraft`
- `securion`
- `codex-reviewer` — automated cross-vendor reviewer (OpenAI/Codex via pi CLI OAuth, MC #107143 D3)
- `gemini-reviewer` — automated cross-vendor reviewer (Google/Gemini API, MC #107143 D3)

How to Add a Verifier

1. Add a line in the "Allowed Verifiers" section: `- \actor-name``
2. Commit the file (`~/system/rules/mc-verifiers.md`) and sync to BookStack.
3. No code change needed — `mc.js` reads this file at runtime.

Gate Logic

When `mc.js done <id> --actor <X>` is called on an H-priority task:

1. If `<X>` is in the Allowed Verifiers list — actor check passes.
2. If `<X>` is the task owner AND not in the list — gate blocks.
3. `--force --reason "<text>"` overrides the actor check + logs `FORCED_COMPLETION` (this remains available to any actor, including `alem`, as an explicit, audited owner-prerogative override — never a silent/default bypass).

Evidence Requirements (ZAKON PI2 Check 5)

For H-priority tasks with category in `[frontend, backend, devops, deploy, infra]`, at least one of the following must exist before `done` is accepted:

1. `docs/evidence/<task-id>/verification.json`
2. `docs/evidence/<task-id>/` directory with at least 1 file
3. `task.dod_evidence` set in DB (via `mc.js ready <id> "notes"`)
4. Absolute path to existing file referenced in the outcome message

Override: `--force --reason "<text>"` logs `FORCED_COMPLETION` and bypasses the evidence gate.
