

# ALAI Companies x Products x File-System Catalog v1.0-draft

## ALAI Companies x Products x File-System Catalog

**Status:** v1 draft, observed state 2026-05-23 **Source of truth:** This file. Machine-readable mirror: `~/system/specs/companies-products-catalog.json` **Maintenance:** Update on entity/product creation, deprecation, or relocation. Drift detection should be wired into the existing blueprint-fleet-watchdog. **Note:** This catalog reflects what is on disk now. Items marked **TBD** require CEO clarification before they can be authoritative.

## Legal entities operated by ALAI

CEO clarification 2026-05-23:

Entity	Jurisdiction	Tree path	Owned by ALAI Holding?	Pravno-vlasnički odnos	Financial passthrough
ALAI Holding AS	Norway (NO)	<code>~/business/ALAI-Holding-AS/</code>	— (parent itself)	Parent entity	Yes
ALAI Tech DOO	Serbia (RS)	<code>~/business/ALAI-Tech-DOO/</code>	Yes — <b>legal owner</b>	Subsidiary of Holding. Drop Srbija + Bilko Srbija operate legally under this DOO (CEO 2026-04-16 consolidation memo <code>project_drop_srbija_legal_entity</code> )	Yes

Entity	Jurisdiction	Tree path	Owned by ALAI Holding?	Pravno-vlasnički odnos	Financial passthrough
SnowIT BA	Bosnia and Herzegovina	~/tenants/SnowIT-BA/	"Naše" operationally — <b>NOT legal ownership.</b> Tech-provider relationship only.	Separate legal entity. ALAI is tech provider with zero financial share per directive 2026-05-15 (MC #100723)	<b>No</b>
Client entities	Various	~/clients-external/<client>/	No (direct clients)	ALAI invoices them	Yes (ALAI bills them)

Reference: ~/system/specs/canonical-registry.md (tree ownership) + memory notes  
 project\_snowit\_legal\_boundary\_2026-05-15, project\_drop\_srbija\_legal\_entity.

# Products by entity

## ALAI Holding AS — products under

~/business/ALAI-Holding-AS/products/

Product	Path	Blueprint	Status / notes
BasicFakta	products/BasicFakta/	yes	Vercel-hosted SaaS, basicfakta.no
Bilko	products/Bilko/	yes (530 lines, 2026-05-20)	Multi-country Balkan accounting SaaS. Single Kotlin/Ktor backend + single Postgres + CF Worker brand routing (4 jurisdictions: HR / RS / BA_FED / BA_RS) per v3 plan APPROVED 2026-05-11. Brand hostnames: bilko.cloud (HR), bilko.rs (RS), bilko.company (BA), bilko.io (primary). Market priority HR→BA→RS (CEO 2026-05-09). Active productization MC #101789.
Bilko-overnight-john	products/Bilko-overnight-john/	yes (530 lines, byte-identical to Bilko per md5 16f4d113...)	<b>TBD</b> — duplicate of Bilko. Archive or merge candidate

Product	Path	Blueprint	Status / notes
Drop	<code>products/Drop/</code>	yes (208 lines, 2026-05-07)	Norway fintech remittance, PSD2 licensure pending
DropSrbija	<code>products/DropSrbija/</code>	yes (386 lines)	Separate codebase from Drop. RS-market operations run legally under ALAI Tech DOO (CEO 2026-04-16). Filesystem currently under Holding/products/ — relocation to <code>~/business/ALAI-Tech-DOO/products/DropSrbija/</code> is a candidate, not decided. Scope question (separate product vs Drop multi-tenant) remains MC #99883.
Gotiva	<code>products/Gotiva/</code>	yes (556 lines)	GCP Cloud Run multi-service
Lobby	<code>products/Lobby/</code>	yes (396 lines)	—
Plock	<code>products/Plock/</code>	yes (512 lines)	—
SnowIT	<code>products/SnowIT/</code>	<b>no</b> (no BP, no CLAUDE.md, no README)	<b>TBD</b> — likely legacy stub. Real SnowIT lives in <code>~/tenants/SnowIT-BA/</code> . Candidate to delete or convert to pointer file
Tok	<code>products/Tok/</code>	yes (637 lines, 2026-04-27)	PSD2 fintech, CI dead since 2026-03 (MC #10452)
unified-form-service	<code>products/unified-form-service/</code>	<b>no</b> (README only)	<b>TBD</b> — product, internal library, or experiment?

Stray non-directory artifacts (Phase-D tree violation — should be moved):

- `products/pbz-banking-dossier-100274.md`
- `products/mojafirma-ux-teardown-100279.md`

## ALAI Tech DOO — products under

`~/business/ALAI-Tech-DOO/products/`

Filesystem directory is currently empty. Per CEO directive 2026-04-16 (memo `project_drop_srbija_legal_entity`), Serbian-market operations of ALAI products operate legally under ALAI Tech DOO even when their code lives elsewhere on disk.

**Important distinction:** "operating under Tech DOO" is a legal/financial classification, not a code-layout decision. The Bilko architecture v3 plan (`~/system/specs/bilko-multi-market-architecture-`

plan-v3-2026-05-11.md, APPROVED 2026-05-11) chose a single backend with country dispatch via JWT org.country claim. "Bilko Srbija" is therefore not a separate product directory — it is the RS market segment of a single Bilko codebase.

Product	Legal entity for RS operations	Filesystem location	Code-layout status
Drop Srbija	ALAI Tech DOO	~/business/ALAI-Holding-AS/products/DropSrbija/	Separate product directory. Relocation to ~/business/ALAI-Tech-DOO/products/DropSrbija/ is a candidate but not decided. Drop and DropSrbija are different codebases.
Bilko (RS market segment)	ALAI Tech DOO	~/business/ALAI-Holding-AS/products/Bilko/ (shared with HR + BA markets)	<b>Not a separate directory.</b> Single backend dispatches per org.country='RS' per v3 plan. Brand hostname bilko.rs routes via CF Worker bilko-edge-proxy to the shared backend bilko-api-demo.

Reference: ~/business/ALAI-Holding-AS/products/Bilko/docs/architecture/MULTI-COUNTRY-ARCHITECTURE.md is the v1 plan (Option D, 3 separate apps) and is marked SUPERSEDED in its own header. Do not use it as a guide.

## SnowIT BA (operated tenant) —

~/tenants/SnowIT-BA/

Subdirectories present:

- calendar
- clients
- company
- contacts
- forms (and others not enumerated in this draft)

Known products / brand assets associated with SnowIT BA per memory project\_lumiscare\_ownership (2026-03-25):

- LumisCare** — owned by Snowit.ba per CEO 2026-03-25. **TBD** — physical artifacts currently sit at ~/clients-external/lumiscare-variants/ (6 variants: lumiscare, alpha, beta, gamma, delta, epsilon). Open question: should they relocate under ~/tenants/SnowIT-BA/products/ or remain in clients-external?

## Direct ALAI clients — `~/clients-external/`

Client	Path	CLAUDE.md
adnan-cesko-dj	<code>clients-external/adnan-cesko-dj/</code>	yes
FreeMyEV-v2	<code>clients-external/FreeMyEV-v2/</code>	yes
KenanHot	<code>clients-external/KenanHot/</code>	yes
klofta-il	<code>clients-external/klofta-il/</code>	yes
knowit-minvei-krav	<code>clients-external/knowit-minvei-krav/</code>	yes
lumiscare-variants	<code>clients-external/lumiscare-variants/</code> (6 sub-variants)	no
merdzanovic-ba	<code>clients-external/merdzanovic-ba/</code>	yes
nordfit	<code>clients-external/nordfit/</code>	no
rendrom	<code>clients-external/rendrom/</code>	yes
virtual-serbia	<code>clients-external/virtual-serbia/</code>	yes

## Engineering repositories —

`~/projects/`

Internal tooling and code repositories (not customer products):

- `alai-cli`, `alai-system`, `autocoder`, `bih-tenders`, `bookstack-api`, `hexadb`, `internal`, `pa`

These are NOT in scope for the products catalog. Listed here for completeness so the catalog doesn't pretend they don't exist.

## Open questions blocking authoritative status

- SnowIT — is `~/business/ALAI-Holding-AS/products/SnowIT/` legacy stub for deletion, or does it hold any non-redundant artifact vs `~/tenants/SnowIT-BA/`?
- LumisCare — confirm: SnowIT-BA product (relocate variants), or direct ALAI client (keep in `clients-external`)?
- Bilko-overnight-john — byte-identical to Bilko (md5 match). Archive or keep as backup?

4. lumiscare-variants — if LumisCare belongs under SnowIT, do all 6 variants relocate?
5. unified-form-service — product, library, or experiment? Determines whether it stays under products/ or moves to ~/projects/.
6. Stray .md files in products/ root — move to docs/scratch/ or delete?

Each of these is one short CEO sentence; until they are answered the catalog stays v1 draft.

---

## Why this catalog exists

Prior reports (blueprint-fresh-analysis, ops-coverage-audit) implicitly enumerated companies and products and produced inconsistent answers — one phantom-included LumisCare/Lexicon, the other omitted SnowIT/unified-form-service. The discrepancy was not a hallucination by one report; it was a symptom of no shared catalog. This file is intended to be that shared file.

## Drift detection wiring (recommended)

- Add to ~/system/daemons/blueprint-fleet-watchdog.js: scan all ~/business/\*/products/, ~/tenants\*/, ~/clients-external\*/ once per cycle and flag any directory not listed in companies-products-catalog.json.
- Add to ~/system/rules/zakon-blueprint-enforcement.md: new product directory creation must also append a row to this catalog.

(Wiring not done in this commit — listed as a follow-on action.)

---
