

FORGE Dispatch Wrapper MC101640

FORGE Dispatch Wrapper MC101640

MC #101640 provides `forge-dispatch.js`, a local FORGE dispatcher for verifier/reviewer/comparator-class agents that use external models.

Tool

- `~/system/tools/forge-dispatch.js`

Purpose

Route external-model verifier agents to local FORGE endpoints for zero-dollar inference instead of defaulting to expensive Opus calls.

Supported invocation

```
node ~/system/tools/forge-dispatch.js <agent-name> --prompt-file <path>
node ~/system/tools/forge-dispatch.js <agent-name> --prompt "inline prompt"
```

Agent examples

- `baseline-comparator` → external Ollama model
- `evidence-verifier` → external MLX model
- `pi-orch-mini-verifier` → external MLX model

Contract

- Exit 0: successful local FORGE dispatch
- Exit 2: agent is not external-model
- Exit 3: all FORGE endpoints unreachable
- Exit 4: invalid arguments
- Successful response includes `cost_usd: 0.0`

Evidence

Durable validation evidence is stored in `/tmp/101640-evidence/`, including syntax/help checks, live local dispatch smoke, and direct machine probe output.
