

MC 101648 Agent Mapping Cleanup

MC 101648 Agent Mapping Cleanup

Verdict: PASS

Date: 2026-05-21

Task: [P3-2] Delete 23-32 unmapped agent .md files; update specialist-mapping.json

Summary

The sweep found active valid agent definitions that were unmapped, plus two invalid duplicate `0.md` files. The safe action was to map valid active agents and archive only the invalid `0.md` duplicates with SHA256 evidence.

Changes

- Updated `~/system/agents/specialist-mapping.json`.
- Added mapping coverage for active unmapped personas in `~/.claude/agents` and `~/system/agents/definitions`.
- Retained active definitions, including `minion.md`, `sentry-code-simplifier.md`, and `sp-code-reviewer.md`, after focused reference checks showed active chain/docs references.
- Archived invalid duplicate files:
 - `~/.claude/agents/0.md`
 - `~/system/agents/definitions/0.md`

Validation

- JSON syntax valid: `python3 -m json.tool ~/system/agents/specialist-mapping.json` exit `0`.
- `~/.claude/agents`: `64` markdown files, `0` unmapped exact/case.

- `~/system/agents/definitions`: 55 markdown files, 0 unmapped exact/case.
- `0.md` no longer exists in either active agent directory.
- Routing smoke tests passed:
 - `code-reviewer` routes to CodeCraft / Code Reviewer and `sp-code-reviewer` alternative.
 - `minion` routes to CodeCraft / Minion at 98% confidence.
