

# P0.7 Intake Classifier Decision — null-route backfill (MC 104025) 2026-06-21

## Summary

P0.7 intake-classifier (MC #104025) ran a deterministic dry-run on 237 null-route open tasks.

## Findings

- 237 null-route tasks exist; only 8 auto-routable by clean filter
- 140 are CEO personal email inbox noise (auto-ingested by email reactor)
- Premise of ~2871 null-route stale; backlog is 237
- Only 1 test artifact (#104140) was auto-routable — bulk-apply skipped

## Decision

No bulk-apply. Lever exhausted. Real fix: **#102113 Email-Reactor Phase 2** (replace whitelist with LLM revenue classifier).

## Evidence

- /tmp/evidence-104025/p07-DECISION-20260621.md
