

Bilko E2E Smoke Sweep — bilko.company (BA landing) — MC #100710

Bilko E2E Smoke Sweep — bilko.company (BA landing) — MC #100710

Run date: 2026-07-28 21:50 UTC **Method:** curl preflight + Playwright MCP browser smoke test (live navigation, not headless script run) **Target:** https://bilko.company/

Results

Check	Result
HTTP status (curl -I)	200 (Cloudflare, HTTP/2)
Page loads	PASS
Page title	"Bilko — Cloud platforma za računovođe" — matches <code>/Bilko/</code> regex from <code>bilkoCompany.spec.js</code>
Console errors	2 errors, 23 warnings — all from Cloudflare Turnstile challenge script (<code>challenges.cloudflare.com/.../turnstile/...</code>), a known cosmetic console-log quirk of the Turnstile widget itself, not app code. No app-origin JS errors observed.
Screenshot	<code>bilko-company-landing.png</code>

Verdict

PASS — bilko.company BA landing is live, serves 200, loads correctly, and title matches the existing Playwright spec assertion (`bilkoCompany.spec.js`). No functional or app-level console errors found.

Notes

- Existing spec file `bilkoCompany.spec.js` was not executed via `npx playwright test` (no Playwright project/package.json scaffolded at that path); verification instead done live via Playwright MCP browser tools against the real URL, which exercises the same assertions (navigate + title match) with additional evidence (console log, screenshot).
- Turnstile console noise is cosmetic (`%c%d font-size:0;color:transparent` obfuscation pattern) — known Cloudflare Turnstile behavior, not a Bilko app bug.
- Raw evidence: `/tmp/bilko-test-sweep/e2e-company/` (report.md, screenshot, snapshot, curl headers, verification.json), also mirrored at `/tmp/evidence-100710/`.
