

QA Review MC #9783 — reviewing MC #8386

Proveo QA Review — MC #9783 reviewing MC #8386

Source task: MC #8386 — URGENT: alai.no contact form is DEAD STUB – wire to real backend

Review task: MC #9783 — QA review: #8386

Reviewer: John / Proveo mode

Review date: 2026-07-28

Verdict: APPROVED_WITH_COMMENTS

Scope

Reviewed whether the live `alai.no` contact form is still wired to a real backend, whether the old dead-stub behavior is absent from the active page, and whether a synthetic submission reaches email.

Files and live assets reviewed

- `/Users/makinja/system/docs/runbooks/contact-form-intake.md`
- `/Users/makinja/business/ALAI-Holding-AS/web/BUILD-BLUEPRINT.md`
- `/Users/makinja/business/ALAI-Holding-AS/web/public/index.html`
- `/Users/makinja/business/ALAI-Holding-AS/web/functions/api/contact.js`
- Live pages: `https://alai.no/`, `https://alai.no/no/`, `https://alai.no/bs/`
- Updated endpoint registry: `/Users/makinja/system/config/known-api-endpoints.json`

Evidence summary

Evidence directory: `/Users/makinja/system/evidence/9783-qa-review-8386/`

Check	Result	Evidence
Live root loads	PASS — HTTP 200	curl-get-status.txt, alai-no.headers
Active live source uses backend call	PASS — fetch('/api/contact') present	live-source-contact-grep.txt
Active live source has no old stub text	PASS — no Form submission logic would go here / old alert in root, /no/, /bs/	live-language-pages-contact-check.txt
/api/contact endpoint exists and has CORS preflight	PASS — OPTIONS HTTP 204	options-status.txt, options.headers
Server-side validation exists	PASS — POST {} returns HTTP 400 {"error":"Name is required"}	invalid-post-status.txt, invalid-post.body
Browser E2E form submit	PASS — Playwright submitted live form, POST /api/contact HTTP 200, response {"ok":true}, success UI visible	playwright-result.json, playwright-contact-success.png
Email delivery	PASS — IMAP search/read found token email UID 737 in john/alai account search	mail-native-search.txt, mail-native-read-john-uid737.txt
Endpoint registry	PASS — alai.no and api.basiconsulting.no documented and JSON re-read validated	/Users/makinja/system/config/known-api-endpoints.json

Synthetic token used: MC9783-20260728T175248Z-30993.

Email evidence excerpt from IMAP UID 737:

```

Findings

Blocking findings

None.

Should fix

1. Public `.bak` files are still served by Cloudflare Pages.

- Evidence: `public-backup-files-head.txt` shows HTTP 200 for:
 - `https://alai.no/index.html.bak`
 - `https://alai.no/index.html.bak-20260216-151821`
 - `https://alai.no/index.html.bak-live-20260212`
- Local grep confirms at least `public/index.html.bak` still contains the original stub text.
- Impact: not a failure of the active `https://alai.no/` contact form, but stale public backup files can confuse audits/crawlers and expose obsolete behavior.
- Recommendation: remove `*.bak*` HTML files from `public/` or block them with Cloudflare Pages routing rules.

Optional hardening

1. Add rate limiting / abuse protection for `/api/contact` if not already enforced upstream.
2. Keep `/api/contact` in the endpoint registry current if the backend migrates away from `api.basicconsulting.no` to UFS.

QA conclusion

MC #8386 acceptance is satisfied for the active production contact form: the dead stub is not present on live active pages, the form submits to a real backend through `/api/contact`, the endpoint validates bad input, Playwright confirms a successful live browser submission, and the synthetic submission landed in email.

Final status: **APPROVED_WITH_COMMENTS** due to publicly served stale backup files under `public/`.
